## FACING THE TIPPING POINTS WITH COOPERATIVE INNOVATION

Our global community is living through pivotal challenges, and cooperative enterprises can play an important role in facing these tipping points with innovative solutions. Standing on a foundation rooted in democratic participation, cooperatives and mutuals can take decisive actions to create a better world for everyone.

The aim to achieve the Sustainable Development Goals by 2030 is approaching, and while it remains elusive for many, a path has been charted, showing us that we must adapt to thrive. To succeed, we must redouble our efforts to be agile and innovative in how we work, produce, and serve our members and communities. **Cooperative enterprises are well-positioned to empower people and create collaborative environments to drive the changes we need.**

Climate change has pushed us to many tipping points. To have the strength and ingenuity to overcome these challenges, it is more important now than ever to build, strengthen and maintain the trust with our members and communities. This is the time to put our cooperative principles into practice and demonstrate that prioritizing people over profit is the foundation to protect our planet for future generations.

### We can't do this alone.

Whether it's teaming up across borders or just swapping ideas and good practices, collaboration is at the heart of intercooperation. It's how we push back against a divided global economy. Let's start building the foundations to share knowledge, tools, and solutions — and face our shared challenges with strength and resilience.

As we celebrate the International Year of Cooperatives, let's build a better world. Together, we can initiate local solutions that resonate globally. This program is our collective opportunity to make a difference.

### We will do this by:

- **EMPOWERING PEOPLE TO ACT – ALIGNING WORDS AND ACTIONS**
- **BUILDING TRUST TOGETHER.**
- **CO-CREATING INCLUSIVE AND LASTING CHANGE**

## CO-CREATING THE FUTURE OF COOPERATION: A LIVE PRINCIPLE 6 EXPERIMENT

This highly interactive co-creation session, led by The Principle 6 Cooperative, invites participants to take part in a live experiment in synthesis of digital and in-person cooperation. We will build on the experience of a CM50 workshop in Madrid—where 50 cooperative and mutual leaders co-designed cross-sector initiatives that would benefit from global cooperative and mutual collaboration. The objective of the session is to collectively develop ideas that could turn into solutions for challenges that are bigger than each of our individual cooperatives.

Participants will experience *Principle 6*, a new cooperative-owned digital platform designed to strengthen collaboration, amplify shared intelligence, and make cooperation scalable. Through a real-time *Cooperative Challenge Lab*, attendees will join one of three thematic groups—*Advocacy*, *Business-to-Business Cooperation*, and *Enabling Solutions*—to co-create initiatives addressing shared global challenges. The exercise will culminate with an AI-assisted synthesis of ideas and a short reflection on how digital tools can advance cooperative innovation.

By the end of the session, participants will have a deeper understanding of *Principle 6*'s mission and architecture, direct experience with digital co-creation, and the opportunity to shape the platform's next phase. The discussion threads initiated during the session will remain open for continued collaboration after the Summit, turning this live experiment into an ongoing digital commons for cooperatives worldwide.

Participants in the session are encouraged to sign up for a free account on ThePrinciple6.coop and join the GCIS Collaborative Community by using our custom link:

### WORKSHOP 3.1: ECOLOGICAL SOLUTIONS FOR COOPERATIVES—FROM VISION TO ACTION

This workshop will explore how cooperatives can integrate concrete ecological solutions into their operations to enhance sustainability and responsibility. Participants will learn about initiatives such as renewable energy use, optimized resource management, and circular economy practices. Through discussions and case studies, they will work on practical actions to reduce waste, improve energy efficiency, and promote green mobility.

**Key Themes:** Ecological solutions, sustainability, renewable energy, resource management, circular economy, eco-actions, waste reduction, energy efficiency, green mobility, cooperative sustainability.

### WORKSHOP 3.2 (AI-RELATED): AI FOR ENERGY TRANSITION—OPTIMIZING, REPAIRING, AND INNOVATING

This workshop will explore how artificial intelligence (AI) can support the energy transition by optimizing renewable energy solutions and promoting a regenerative approach for systems and communities. Participants will learn how AI can enhance energy efficiency, manage smart grids, and reduce waste. The session will also highlight how cooperatives can use these technologies to strengthen resilience against environmental and social challenges.

**Key Themes:** Artificial intelligence (AI), energy transition, renewable solution optimization, energy efficiency, smart grid management, waste reduction, regenerative approach, cooperative resilience, environmental and social challenges.

### WORKSHOP 3.3: FROM RESILIENCE TO IMPACT—COOPERATIVES AS DRIVERS OF THE CIRCULAR ECONOMY

This workshop will explore how cooperatives can move beyond resilience and become key drivers of the circular economy. Rather than simply reacting to environmental crises, cooperatives have the potential to lead systemic change by embedding sustainability into their core practices. Participants will examine concrete strategies to mobilize their members, implement circular and sustainable energy solutions, and develop collective projects rooted in resource efficiency and regeneration. The session will offer tools and inspiration to help cooperatives scale their impact and actively shape a more circular, sustainable, and resilient future.

**Key Themes:** Circular economy, resilience, ecological transition, cooperative leadership, sustainable energy, resource efficiency, member mobilization, collective action, regenerative practices, systems change, measurable impact.
